MAZZEI GREEN

Just about everything Mazzei Injector Company does is environmentally friendly. From purifying water with ozone to cleaning up wastewater, our technology and products/systems are designed to promote green initiatives.

Protecting our environment is a high priority for Mazzei and to support this goal, we will:

- ▶ Comply with all applicable local, state and federal environmental regulations.
- ▶ Continually improve the environmental performance of our products and processes.
- ▶ Protect the health and safety of our employees, community and ecosystems.
- ▶ Use natural resources, including raw materials, energy and water, as efficiently as possible.

Mazzei will work to achieve these commitments by:

- ▶ Requiring environmental awareness training of all our employees.
- ▶ Promoting recycling efforts at our facility.
- ▶ Encouraging employees to participate in environmentally friendly practices such as carpooling, recycling and conservation.
- ▶ Evaluating products and processes from a chemical risk point of view, dedicating the company to finding environmental alternatives that prevent pollution.
- ▶ Considering the risks of our raw materials and products at all stages of our product's life.
- ▶ Working collaboratively with our customers and suppliers on environmental issues.
- ▶ Making every effort to ensure that environmental concerns are an integral part of Mazzei's mission and that of our employees.

Mazzei environmental efforts include, but are not limited to, the following:

- ▶ Product passivation is performed in-house to better control the process and save transportation energy, whenever possible.
- ▶ The use of citric acid (an eco-friendly product) instead of nitric acid (a hazardous liquid) in our passivation process, whenever possible.
- ▶ Designing systems that use ozone for disinfection – a green chemistry – instead of chemicals.
- ▶ Mazzei Injectors generally do not require supplemental pumps thus saving energy.
- ▶ Mazzei regrinds and reuses waste byproduct from the manufacturing of our products making certain that all raw materials are used and not wasted.
