EXH# 2070-004

March 15, 2017

**SUBJECT:** National Sanitation Foundation (NSF-61) Compliance

Stainless steel assemblies produced by Mazzei Injector Company (Mazzei) are **compliant** with NSF International Standard NSF/ANSI 61 – 2013.

Compliance is based on Section 3.4 – *Products manufactured from Annex C acceptable materials* of the standard. This section specifically states,

“Products manufactured entirely from Annex C materials shall not be required to undergo extraction testing for material-specific analyses of interest.”

Annex C states,

“A material shall be designated as an “acceptable material” in Table C1 if it has a standard material formulation or specification (e.g., ASTM); has undergone extraction testing that demonstrates that the material does not contribute any contaminant in excess of its acceptable level as determined by this Standard (see Annex C, section C.3); and is accompanied by adequate documentation (see 3.4).”

Several grades of stainless steel are listed in Annex C including: 304, 304L, 316, 316L, and 2205.

It is important to note that using a product made from a material appearing in Annex C does not mean that the specific product is NSF certified, but rather is constructed of accepted materials that do not require testing to be considered in compliance the NSF 61 standard.

For further information on NSF Standards, contact NSF International, 3475 Plymouth Road, P.O. Box 130140, Ann Arbor, MI 48105, USA or on their website at <http://www.nsf.org/>.
