Mazzei® Wine PumpOver Injector Featured in Wine Business Monthly
Mazzei Injector 2081 chosen as one of the “Fourteen Cool Products” of 2011

BAKERSFIELD, Calif. — Mazzei Injector Company, LLC has announced that its new cast stainless steel injector for wine PumpOvers has been featured in the March issue of Wine Business Monthly.

Based on the many new products showcased at the recent Unified Wine & Grape Symposium held in Sacramento, Calif., the Mazzei PumpOver injector model 2081 was chosen as one of the fourteen “most interesting new products” at the show.

The PumpOver injector 2081 was chosen for its solid CF3M cast stainless steel construction and its “easy-to-use, easy-to-clean design.” The model 2081 is used in macro-aeration in the fermentation process. The Mazzei Wine PumpOver aeration system draws a substantial amount of air into the juice which aids in strong yeast development, maintains yeast viability and minimizes the production of sulfides. The process enhances color stabilization and purges excess carbon dioxide from the top of the tank.

Mazzei injectors are also used in other wine industry applications including disinfection of wine barrels, tanks and other CIP applications. Mazzei injectors are used for wastewater aeration treatment of ponds and tanks and in vineyard chemigation. The patented AirJection® Irrigation System is used in irrigation applications to increase crop yields.
