Mazzei Announces New Metering Valve
MV-5 Metering Valve provides increased flow control

BAKERSFIELD, Calif. — The Mazzei Injector Company, LLC has announced the introduction of a new metering valve that is engineered to provide increased flow control through all valve positions. According to Mazzei President, Bill Van Skike, “the new MV-5 valve offers a more precise and accurate flow for a variety of applications. It’s a step up in metering valves and will be a welcomed addition in agriculture applications where flow control is important.”

The new MV-5 features a plug valve design with a custom “V Port” characterized seat control that delivers a better turn down capacity. The valve is thread fitted allowing for easy installation and maintenance. A male to female threaded adapter for inlet and discharge is optional. Available in UV resistant Polypropylene or FDA approved natural PVDF, the MV-5 is designed for chemical feed in agricultural or industrial applications.
